

12 Refurbishment works

During refurbishment works the design criteria would be the same as referenced within this document. There may be scenarios where this is not achievable or practical since the building structure is already existing. In this case, it is important to investigate on the non – compliances, and agree to a specific plan and design regime. This can be relevant to the type of works relate to the refurbishment and what is the extent of the works e.g. if the existing window / glazing façade is to be retained, then the intrusive noise criteria may not be met.
